

Height of Broad Street
at the intersection of
Market = 29.05
Asheton = 13.05
Total ascent 25.8 of
the road from Asheton
to Broad Street.

I have examined the annex'd draft made by Geo. Menick
and find it to be correct. The red figures denote the heights
of the Streets as fixed by law. by which it is shown that
the tops of the Piers of the permanent Bridge are on a level
with Market Street
