

Russell-Soundex Quick as a Flash
To File and Find

How to interpret a poorly written name or the spelling of a name having phonetic variations:-

Disregard a e i o u w h y.

Consider double letters and equivalents (letters in the same line: i. e., c g s x etc.) as single letters and code as such.

The initial letter of the surname is never affected or changed by the Russell-Soundex system. (The initial letter of the surname is never coded because it is filed according to this letter)

The remaining letters of the alphabet in a surname are coded as follows:

An Example

"Earhart"

<u>Code</u>	<u>Coding Process</u>	<u>Some variations</u>
1- B f p v	E is the initial letter and not coded	663 Earhard
2- C g j k q s x z	" a " is disregarded	663 Ehrhard
3- D t	" r " is coded 6	663 Ehrhart
4- L	" h " is disregarded	663 Ehrhaert
5- M n	" a " is disregarded	663 Erehart
6- R	" r " is coded 6	663 Erhard
	" t " is coded 3	663 Erhart

Russell-Soundex brings together in one place in the file varied spellings of the same name or misinterpretations of handwriting.

Other index systems widely separate each variation and require special search in several places.

In the above example, if you were searching for Earhart (or any of the other spelling of this name), you would look under E 663. For detailed instructions on this coding, see first volume of this year's index.
